RECAP – WHAT
DID WE LEARN
LAST TERM?

THIS TERM - **DATA SCIENCE**

WHAT IS DATA SCIENCE?

- Learning **trends and patterns** from large amounts of **data**
- My favourite area of Computer Science
- E.g. identifying cancers from MRI scans

MOVIE RECOMMENDATIONS – A PRACTICAL EXAMPLE

PLAN FOR THIS TERM

- Show sample posters from last year
- Over the next few classes, we'll develop our Data Science skills together
- In April, you will create a poster in a topic you find really interesting!

FIND A GROUP PARTNER

- You will be working in **pairs** for the rest of the term
- Find a group partner to work together with
- If you haven't found a person, let the educators know and we can assign you to a group

RESEARCH AREA

- With your group partner, pick a **research area** you are both interested in analysing
- Start off with your hobbies and what you both like, for example:
 - *Movies*
 - *Sports (e.g. Football, Basketball)*
 - *Airplanes or Trains*
 - *Lego*
- You could also pick something else that you think could be cool:
 - *Social Media usage*
 - *Happiness levels in different countries*
 - *How people use transport to get to school e.g. car, bike, walk*

Happiness Continuum

Creative Expressions Consulting Blog by Art Therapist Lynn Cukaj, ATR-BC

RESEARCH QUESTION

- You should now have a **research area** figured out – if not, you still have time now to figure it out
- You should now think of an interesting **research question**, for example:
 - If you chose movies, your research question could be "What movie genres have the highest ratings on average?"
 - If you chose Happiness Levels, your research question could be "What country has the highest happiness levels on average?"
 - If you chose Trains, your research question could be "How punctual are train arrivals in Ireland?"

GETTING STARTED - DATASETS

- What is a **dataset**?
 - What is a .csv file
- Look at the ***imdb_top_100.csv*** file on Google Classroom
 - Look at the different **column headers**
 - Scroll through and have a look yourself

FINDING A DATASET

- You should have your research question figured out – if not, that's ok. You have time to figure it out.
 - e.g. *"Do books with more pages have higher ratings?"*
- You should also have your research area figured out
 - e.g. *Books*
- You now need to find a dataset that could help you answer your research question!
 - Check **Kaggle** (<https://www.kaggle.com/>)
- I like books, so I'll check Kaggle for a dataset on books
